## Bridge the gap between theory and application in *Beyond the Basics*

Attention all occupational health and safety committee members, did you know you're entitled to eight hours of annual training? There's no better way to spend that time than with our *Beyond the Basics* workshop.

This advanced course builds on the theory you already know and helps you put it into practice. *Beyond the Basics* is designed with you in mind—the content is specific to healthcare, meaning everything you learn will be relevant.

## Can you spot the kitchen hazards?

Kitchens are full of hazards — which ones can you spot in the image above?

This month, you can get 50% discount on our online, self-paced course, *Kitchen-related hazards*. Use code `kitchen50` at checkout.

The course is for anyone who works in a kitchen, supervises kitchen staff, or supports the health and safety of kitchen workers in their organization.
